Tamil Nadu may witness extended rainfall activity with fresh weather system in early December

CHENNAI – 28 Nov, 2026 A fresh weather system forecast to develop in early December is expected to prolong rainfall activity over Tamil Nadu.

The Regional Meteorological Centre (RMC) is likely to revise its forecast based on the system's movement, while noting that the probability of it intensifying into a depression remains low.

According to the extended weather forecast, an upper air cyclonic circulation is likely to form over south Andaman sea on Sunday. This may trigger formation of a low pressure area over south Andaman sea and southeast Bay of Bengal around November 30. There is a low possibility of the system intensifying into a depression over southeast Bay of Bengal around December 2.

Easterly wave trough would continue to influence wet weather over various parts of the State until the month-end. On Saturday, a few districts, including Nilgiris and Kanniyakumari, are likely to receive isolated heavy rainfall. Various other places in interior and south coastal Tamil Nadu, including Tiruchi, Madurai, Erode and Ramanathapuram, are likely to receive showers of moderate intensity.

Rainfall is expected to cover most parts of the State from December 1.
